Comprising: (a) obtaining a sample from the cancer is determined by a method of cancer, the sample comprising gene expression products, the presence candor amount of which forms a pattern that is indicative of the cancer: (b) determining the pattern, and obtaining an indicative of the cancer: (c) determining the pattern, and obtaining an indication of the cancer: (d) determining the pattern, and obtaining an indication of the groducts forming the pattern, and obtaining an indication of the cancer: (d) determining the pattern, and obtaining an indication of the cancer: (e) the individual based on step (b). At least one or two of the gene expression products forming a pattern used to determine the cancer of in the individual based on step (b). At least one or two of the gene expression products forming a pattern used to determine the cancer of the selected individually from any of the 134 genes comprising 367-7850 (c) are selected individually from any of the 134 genes comprising 367-7850 (c) a method for treating an individual, a method for reducing malignancy of a cell; a method for producing maliphancy of a cell; a method for producing maliphancy of the cell from a biological tissue; pharmaceutical composition, for classification of cancer in an individual having contracted cancer. (c) comprising at least one marker capable of determining the microsatellite status and the prognostic marker; where the microsatellite status and the prognostic composition for the treatment of a cancer in a nimal tissue. The method above is useful for probactions, a method is cancer, i.e. colon cancer, e.g. on adenocarcinoma, a carcinoma, a carcinoma, a sarcoma, and/or a lymphoma. The present sequence represents a colon cancer-associated gene used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 27-DEC-2003;

The proteins and their coding sequences are useful for treating a disease associated with NF-kappaB activation, such as inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases, or ischaemic disorders.
                                                                                                                                                                                                                New purified protein that activates nuclear factor kappa B (NF-kappaB), useful for treating inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases or

The CC specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO 262 polypeptides can be used to modulate cellular cellular differentiation and/or modulate cellular CC proliferation, modulate cellular differentiation and/or modulate cellular cc associated disorder, regulate extracellular matrix structuring, cellular cc adhesion. The proteins can be used to treat any von Willebrand factor-cc adhesion, and cell trafficking and/or migration, modulate cellular cc interactions, modulate cell adhesion in proliferative disorders, such as cc cancer, modulate the proliferation, differentiation, and/or function of cc cells that appear in the bone marrow, and leukocytes, treat bone marrow, complements y congestion or oedema, emphysema, chronic bronchitis, bronchial casthma and bronchiectasis, intestinal disorders, speen associated cd diseases, modulate renal disorders, treat cardiovascular disorders such cas ischemic heart disease, modulate the proliferation, differentiation, cand/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat of disorders associated with the ovaries, cerebral oedema, hydrocephalus, companion herniations, iatrogenic disease, inflammations, bacterial and viral concephalitis, and treat hepatic diseases, hydrocephalus and concephalitis, and treat hepatic disorders, hydrocephalus and concephalitis, and treat hepatic disorders, hydrocephalus and concephalitis, and treat hepatic disorders.

Ist strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
1st strand cDNA was primed with a NotI of and cloned
1end enriched, double-strand cDNA was digested with Not I and cloned
1into the Not I and EcoRV sites of the pcMVSPORT 6 vector. Library
1 was not normalized. Library was constructed by Life Technologies, a
1 division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hominidae; Homo.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the PCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AL558881 Homo sapiens T CELLS (JURKAT CELL LINE) COT 10-NORW Homo sapiens con CSODJ015YF12 3-PRIME, mRNA sequence.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hominidae; Homo.

BM strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                 ۳

eye disease. 100ug of total RNA was used for library
construction. A directionally cloned cDNA library in the
pspORT1 vector (Life Technologies) was constructed at
Bioserve Biotechnology (Laurel MD) essentially following
the protocols of the SuperScript Plasmid System full
details of which are contained in the manufacturer's
Instruction manual (http://www.lifetech.com/). First
strand synthesis was carried out using a Not I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HIN,
